

Have you experienced an HDFN pregnancy?  
Are you pregnant,  
or do you have plans to become pregnant again?

DETERMINED TO  
PROTECT WHAT  
MATTERS MOST

The image depicted contains models and is being used for illustrative purposes only.

### The Azalea clinical trial is enrolling participants who:

- Have tested positive for red cell antibodies
- Have been diagnosed with HDFN in a prior pregnancy
- Are 18 to 45 years old

### What Participation Means

Participation in this clinical trial includes weekly intravenous (IV) infusions while visiting the trial site approximately 20 - 23 times during your pregnancy. After your child's birth, you will have three additional trial site visits over the course of six months, and your child will have six trial site visits over the course of two years.

As a participant in the Azalea study, you will be randomly assigned to receive an infusion of the investigational medication; this can be the active investigational medication or placebo (the randomization ratio is 2:1, respectively). Placebo does not contain any active medication.

All participants in the clinical trial will be reimbursed for study required travel and receive study required medical care at no cost. The investigational medication will be provided at no cost to you. You will not be paid for other medical care or medications which are not part of the study. The investigational medication has not been approved for use by the FDA.
